Treatment Options for Anal Fistula

1. Conventional Surgery

Traditional fistula surgery involves cutting open the tract. While effective, it often requires longer healing and carries a risk of recurrence.

2. Laser Fistula Treatment

Modern Fistula Treatment in Bangalore often uses laser technology:

- Precise removal of the fistula tract
- Minimal pain and bleeding
- Same-day discharge
- Faster healing compared to open surgery

3. EPSiT (Endoscopic Pilonidal Sinus Treatment – adapted for fistulas)

For complex or multiple tracts, endoscopic techniques provide:

- Camera-guided precision
- Minimal cuts
- Quick recovery

- Lower recurrence rates

4. Seton Placement (For Complex Cases)

Used in cases where fistulas involve deeper muscles, seton threads help drain infection gradually while preserving sphincter function.
